

► **700 SERIES PORT-a-STRIP**

**Important Information on the 700 Series Port-a-Strip**

This NI-CAD battery powered Hand-Held tool delivers, in less than five seconds, Production Quality Strips in the form of a low-cost portable tool. The complete unit is made up of two basic components:

**1.** A “Quick-Change” very precise Cutter Head that can be ordered for any required strip dimension. The Cutter Head blades last up to 10,000 (est.) strips and its low cost makes additional or replacement cutters very affordable.

**2.** A very powerful Portable Hand-Held Driver. This tool is assembled with only the highest quality components and comes with a 100% - 1-year “No Questions Asked” Warranty to prove it. Our driver can be powered by a removable Ni-Cad battery pak or by the #727 AC/DC Power Supply.

► **APPLICATIONS**

Jobs where time, quality and portability are essential. Wiring up a “Video Router”, Telco Exchange or Computer LAN are good examples. CATV and MATV contractors are ideal applications.

Applications that are difficult yet require extreme precision. In some cases these may be very low volume applications. Aerospace, Radar, and Microwave/RF are good examples.

Small and medium production applications where the cost of a production machine (\$2,000 to \$13,000) is either cost prohibitive or unnecessary. This tool compromises nothing when comparing precision and strip quality. OEM's and cable assembly manufacturers are good environments.
